15. Workflows

15.1 Vehicle Sale Workflow

15.2 Service Job Card Workflow

16. Print Formats & Reports**17. Testing Strategy**

17.1 Unit Tests

17.2 Running Tests

18. Deployment Guide

18.1 Production Setup

18.2 Supervisor Config

18.3 Nginx Config

19. Go-Live Checklist**20. Maintenance & Upgrades**

1. Project Overview

This document provides a complete, end-to-end implementation guide for building an automobile dealership management system on top of **ERPNext v15+** using the Frappe Framework. It covers all 8 operational departments — vehicle inventory, sales CRM, service workshop, finance & insurance, HR payroll, marketing, analytics, and OEM compliance reporting.

1.1 Business Scope

Department	Module	Priority
Sales & Lead Management	DMS + CRM	Must Have
Vehicle Inventory	Stock + Custom DocTypes	Must Have
Finance & Insurance	Accounts + Custom	Must Have
Service Workshop	Maintenance + Custom	Must Have
HR & Payroll	HR Module + Custom	Important
Marketing & Retention	CRM + Integrations	Important
Analytics & OEM Reports	Reports + Custom	Important
Operations & Security	Custom Integrations	Nice to Have

1.2 Technology Stack

Technology	Version	Role
ERPNext	v15+	Core ERP platform
Frappe Framework	v15+	App scaffolding, DocTypes, workflows
MariaDB	10.6+	Primary database
Redis	7+	Cache & background queue
Python	3.11+	Backend logic
Node.js	18+	Asset bundling (Vite)
Nginx	Latest	Web server / reverse proxy
Supervisor	Latest	Process management

1.3 Custom App

The custom app extends ERPNext with dealership-specific functionality:

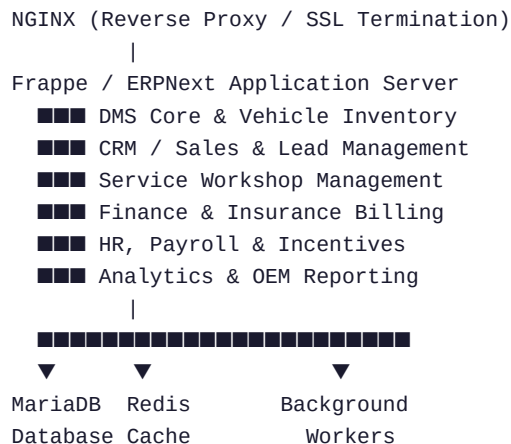

- Custom DocTypes: Vehicle, Test Drive, Vehicle Sale, Service Job Card, Loan Application, Insurance Policy
- Extended DocTypes: Item, Customer, Sales Order with vehicle-specific fields

- Custom Workflows: Vehicle Sale approval chain, Service Job lifecycle
- Print Formats: Vehicle Invoice, Job Card, Insurance Certificate
- API Integrations: WhatsApp, insurance portals, bank DSA APIs, OEM portals

2. System Architecture

2.1 High-Level Architecture

The system runs as a Frappe application behind an Nginx reverse proxy, with MariaDB as the primary database and Redis for caching and background job queues. The custom **auto_dealer** app sits as a layer on top of ERPNext's core modules.

2.2 Custom App Architecture

3. Environment Setup

3.1 Server Prerequisites

Resource	Minimum	Recommended
CPU	4 cores	8 cores
RAM	8 GB	16 GB
Storage	100 GB SSD	250 GB SSD
OS	Ubuntu 22.04 LTS	Ubuntu 22.04 LTS
Database	MariaDB 10.6	MariaDB 10.11

3.2 Install Frappe Bench & ERPNext

```
# Install system dependencies
sudo apt update && sudo apt install -y git python3-dev python3-pip \
    mariadb-server redis-server nginx supervisor wkhtmltopdf

# Install bench CLI
pip3 install frappe-bench

# Initialize bench with ERPNext v15
bench init --frappe-branch version-15 /home/frappe/erp-bench
cd /home/frappe/erp-bench
bench get-app --branch version-15 erpnext

# Create site
bench new-site dealership.local \
    --db-name erpnext_auto \
    --admin-password YourStrongPassword123

# Install ERPNext
bench --site dealership.local install-app erpnext
```

3.3 Create Custom App

```
# Scaffold new app
bench new-app auto_dealer

# App Title:      Auto Dealer
# App Description: Automobile Dealership Management for ERPNext
# App Publisher:   Your Company Name
# App License:     MIT

# Install on site
bench --site dealership.local install-app auto_dealer
```

4. Custom App Scaffolding

4.1 hooks.py — Core Configuration

The hooks.py file is the entry point of the custom app. It registers scheduled tasks, document event handlers, fixtures, and overrides for existing ERPNext DocTypes.

```
app_name = "auto_dealer"
app_title = "Auto Dealer"

required_apps = ["frappe", "erpnext"]

# Override existing DocTypes
override_doctype_class = {
    "Sales Order": "auto_dealer.overrides.sales_order.CustomSalesOrder",
    "Customer": "auto_dealer.overrides.customer.CustomCustomer",
}

# Scheduled tasks
scheduler_events = {
    "daily": [
        "auto_dealer.tasks.send_service_reminders",
        "auto_dealer.tasks.check_insurance_renewals",
        "auto_dealer.tasks.check_amc_renewals",
    ],
    "weekly": ["auto_dealer.tasks.slow_moving_inventory_alert"],
    "monthly": ["auto_dealer.tasks.generate_oem_monthly_report"],
}

# Document events
doc_events = {
    "Vehicle Sale": {
        "on_submit": [
            "auto_dealer.events.vehicle_sale.on_submit",
            "auto_dealer.events.vehicle_sale.trigger_whatsapp_confirmation",
        ],
    },
    "Service Job Card": {
        "on_submit": "auto_dealer.events.service_job_card.on_submit",
    },
}

# Fixtures exported with the app
fixtures = [
    {"dt": "Role", "filters": [{"name", "in", [
        "Dealer Admin", "Sales Consultant", "Service Advisor",
        "Workshop Technician", "Finance Executive", "DMS Manager"
    ]}]},
    {"dt": "Workflow"},
    {"dt": "Print Format"},
    {"dt": "Custom Field"},
]
```

5. Module 1 — Dealer Management System (DMS) Core

Vehicle DocType & Vehicle Sale transaction

5.1 Vehicle DocType — Key Fields

Field Name	Type	Description
vin_number	Data (Unique)	17-char Vehicle Identification Number
make	Link → Vehicle Make	Manufacturer (Maruti, Hyundai, Tata...)
model	Link → Vehicle Model	Model name
variant	Data	Variant (VXI, ZXI, etc.)
year_of_manufacture	Int	Manufacturing year
color	Link → Vehicle Color	Colour from master
fuel_type	Select	Petrol / Diesel / CNG / Electric / Hybrid
vehicle_type	Select	New / Used / Demo / Certified Pre-Owned
status	Select	Available / Booked / Sold / In Service / Demo
ex_showroom_price	Currency	Ex-showroom price
on_road_price	Currency	Full on-road price
days_in_stock	Int (Read Only)	Auto-calculated from OEM invoice date
oem_invoice_date	Date	Date of receipt from OEM

5.2 Vehicle Controller — Key Business Logic

```
class Vehicle(Document):

    def before_save(self):
        self.calculate_days_in_stock()
        self.validate_vin()

    def calculate_days_in_stock(self):
        if self.oem_invoice_date:
            self.days_in_stock = date_diff(today(), self.oem_invoice_date)

    def validate_vin(self):
        if self.vin_number and len(self.vin_number) != 17:
            frappe.throw("VIN Number must be exactly 17 characters.")

    def on_submit(self):
        if self.status == "Sold":
            self.update_inventory_ledger()
```

5.3 Vehicle Sale — Submission Chain

When a Vehicle Sale document is submitted, the system automatically executes the following chain of actions in sequence:

- Validates vehicle is still Available or Booked
- Calculates grand total including registration, insurance, accessories, and discounts
- Updates Vehicle status to Sold and links the customer
- Creates a Sales Invoice with correct GST tax template
- Logs a CRM Activity record for sales reporting
- Creates a Vehicle Delivery Checklist document
- Triggers a WhatsApp confirmation message to the customer

6. Module 2 — Vehicle Inventory Management

6.1 Inventory KPIs Tracked

KPI	Source	Alert Trigger
Total vehicles available	Vehicle DocType	—
Slow-moving vehicles	days_in_stock > threshold	Configurable (default 60 days)
Booked vehicles	status = Booked	—
Stock ageing by model	Grouped report	Weekly email to DMS Manager
Parts stock below reorder	Bin DocType	Daily check, auto Material Request

6.2 Marketplace Sync — CarDekho Integration

Vehicle listings are auto-synced to CarDekho's partner portal when a vehicle is marked Available. The sync includes VIN, specs, price, and images. Failed syncs are logged to the Frappe error log for retry.

```
def sync_to_cardekho(vehicle_name):
    vehicle = frappe.get_doc("Vehicle", vehicle_name)
    settings = frappe.get_single("Auto Dealer Settings")

    payload = {
        "dealer_id": settings.cardekho_dealer_id,
        "vin": vehicle.vin_number,
        "make": vehicle.make,
        "model": vehicle.model,
        "price": vehicle.ex_showroom_price,
        # ... more fields
    }
    response = requests.post(
        settings.cardekho_api_url,
        json=payload,
        headers={"Authorization": f"Bearer {settings.cardekho_api_key}"},
    )
    response.raise_for_status()
```

7. Module 3 — Sales & Lead Management (CRM)

7.1 Lead Assignment — Round Robin

Leads are auto-assigned to Sales Consultants using a load-balanced round-robin algorithm based on current open lead count. A WhatsApp acknowledgement is sent to the prospect immediately after lead creation.

7.2 Test Drive DocType — Validations

Validation	Rule
Vehicle availability	Vehicle status must be Available or Demo
Slot conflict	No two test drives for same vehicle at same time
Driving license	DL number is mandatory before booking is saved
Lead linkage	Test drive must be linked to a Lead or Customer

7.3 Post-Test-Drive Follow-up Automation

When a Test Drive is marked Complete, the system automatically creates a follow-up Activity assigned to the Sales Consultant due the next business day. Vehicle status is reverted to Available.

8. Module 4 — Finance, Insurance & Billing

8.1 Loan Application — EMI Calculation

The standard reducing-balance EMI formula is used: $EMI = P \times r \times (1+r)^n / ((1+r)^n - 1)$. All calculation fields (EMI, total payable, total interest) are auto-populated on save.

```
def calculate_emi(self):
    p = self.loan_amount          # Principal
    r = (self.interest_rate / 100) / 12  # Monthly rate
    n = self.tenure_months
    if r > 0:
        emi = p * r * ((1 + r) ** n) / (((1 + r) ** n) - 1)
        self.emi_amount = round(emi, 2)
        self.total_payable = round(emi * n, 2)
        self.total_interest = round(self.total_payable - p, 2)
```

8.2 GST Configuration for Vehicle Sales

Tax Component	Rate	Account Head
CGST	14%	CGST Payable
SGST	14%	SGST Payable
IGST (inter-state)	28%	IGST Payable
TCS (on vehicles > ₹10L)	1%	TCS Payable

8.3 Insurance Policy — Renewal Automation

Insurance policies expiring within 30 days trigger automated WhatsApp renewal reminders to the customer. The renewal quote is fetched in real-time from the insurer's API.

9. Module 5 — Service & After-Sales Workshop

9.1 Service Job Card Lifecycle

Stage	Status	Triggered Action
Customer arrival	Open	Create job card, send WhatsApp to customer
Bay assignment	Bay Assigned	Notify technician
Work starts	Work in Progress	Start timer for labour hours
Work complete	QC Check	Quality inspection step
Ready for delivery	Ready	WhatsApp notification to customer
Vehicle delivered	Delivered & Invoiced	Create service invoice, collect payment

9.2 Auto Parts Request on Job Card Submit

When a Service Job Card is submitted, the system checks stock for each required part. If any part's quantity in the Service Warehouse is below the required amount, a Material Request is auto-created and assigned to the Parts Incharge.

9.3 AMC Contract — Reminder Schedule

Trigger	Days Before Expiry	Channel
First reminder	30 days	WhatsApp
Second reminder	15 days	WhatsApp + Email
Final reminder	7 days	WhatsApp + Call task to SA
Expired alert	0 days (expiry)	Email to Dealer Admin

10. Module 6 — HR, Payroll & Incentives

10.1 Sales Incentive Structure

Incentives for sales consultants are calculated monthly and include four components:

Component	Basis	Example
Vehicle sale incentive	Per vehicle sold (by type)	■3,000 per new car
Finance cross-sell bonus	Fixed per finance deal	■500 per deal
Insurance cross-sell bonus	Fixed per insurance deal	■300 per deal
Accessories upsell commission	5% of accessories value	■1,000 on ■20,000 accessories

10.2 Payroll Integration

The monthly incentive calculation is linked to ERPNext's native Payroll Entry. The incentive component is added as an Earning in the Salary Structure, auto-populated from the incentive calculation report before payroll processing.

11. Module 7 — Marketing & Customer Retention

11.1 WhatsApp Automation Templates

Template	Trigger	Variables
lead_acknowledgement	New lead created	customer_name, model, dealership_name
test_drive_confirmation	Test drive submitted	name, vehicle, date, time
service_started	Job card submitted	name, job_card, vehicle, advisor
vehicle_ready	Job card completed	name, vehicle, invoice, amount
amc_renewal_reminder	30/15/7 days before AMC expiry	vehicle, expiry_date
insurance_renewal	30 days before policy expiry	vehicle, policy_number, expiry_date

11.2 Loyalty Points — Earn & Redeem

Event	Points Awarded
Vehicle purchase	500 points
Service visit	50 points per visit
Referral (friend buys a car)	200 points
Insurance renewal at dealership	100 points
Redemption value	1 point = ₹1 off on service

12. Module 8 — Analytics & OEM Reporting

12.1 Dealer Dashboard KPIs

KPI Category	Metrics Shown
Vehicles	Available, Booked, Sold MTD, Slow-moving (>60 days)
Revenue	Vehicle sales MTD, Service revenue MTD, Parts revenue MTD
Leads	New today, Open leads, Converted MTD
Service	Open jobs, Completed today, Pending delivery
OEM Targets	Volume target vs achieved, % completion

12.2 OEM Monthly Report Structure

Column	Description
Model / Variant	Vehicle model and variant sold
Units Sold	Total retail units in the month
Retail Revenue	Total revenue (grand total)
Finance Penetration %	% of sales with finance arranged
Insurance Penetration %	% of sales with insurance sold
Avg Discount	Average discount given per unit

13. Integrations

13.1 Auto Dealer Settings — Configuration Fields

Field	Type	Purpose
dealership_name	Data	Displayed on invoices and messages
oem_brand	Select	OEM brand (Maruti / Hyundai / Tata...)
whatsapp_enabled	Check	Toggle WhatsApp messaging on/off
whatsapp_api_key	Password	Interakt / Wati API key
cardekho_dealer_id	Data	CarDekho partner dealer ID
finance_crosssell_bonus	Currency	Bonus per finance cross-sell deal
insurance_crosssell_bonus	Currency	Bonus per insurance deal
loyalty_point_value	Currency	Rupee value per loyalty point
slow_moving_threshold_days	Int	Days before slow-moving alert (default 60)

13.2 External API Integrations Summary

Integration	Provider Options	Use Case
WhatsApp Business	Interakt, Wati, AiSensy, Gupshup	Customer notifications
Vehicle marketplace	CarDekho, OLX Autos, Cars24	Inventory listing sync
Loan DSA	HDFC, ICICI, Lendingkart portals	On-spot finance applications
Insurance	Coverfox B2B, Policybazaar Biz	Policy issuance at delivery
GST filing	GST portal / Cleartax API	GSTR-1 / GSTR-3B filing

14. Roles & Permissions

14.1 Role Matrix

R = Read | W = Write | C = Create | D = Delete | S = Submit

DocType	Dealer Admin	DMS Manager	Sales Consult.	Service Adv.	Workshop Tech	Finance Exec
Vehicle	RWCD	RWCD	R	R	R	R
Vehicle Sale	RWCDS	RWCS	RWC	—	—	RS
Test Drive	RWCD	RWCD	RWCD	—	—	—
Service Job Card	RWCDS	RWS	—	RWCDS	RW	—
Loan Application	RWCDS	—	RWC	—	—	RWCDS
Insurance Policy	RWCDS	—	RWC	—	—	RWCDS
Lead	RWCD	RWCD	RWCD	—	—	—
OEM Target	RWCD	RWC	R	—	—	—

15. Workflows

15.1 Vehicle Sale Workflow

From State	Action	To State	Allowed Role	Condition
Draft	Verify	Verified	DMS Manager	grand_total > 0
Verified	Approve Finance	Finance Approved	Finance Executive	finance_done = 1
Verified	Skip Finance	Delivery Scheduled	DMS Manager	finance_done = 0
Finance Approved	Schedule Delivery	Delivery Scheduled	DMS Manager	—
Delivery Scheduled	Mark Delivered	Delivered	Dealer Admin	—

15.2 Service Job Card Workflow

From State	To State	Allowed Role
Draft	Bay Assigned	Service Advisor
Bay Assigned	Work in Progress	Workshop Technician
Work in Progress	QC Check	Workshop Technician
QC Check	Ready for Delivery	Service Advisor
Ready for Delivery	Delivered & Invoiced	Service Advisor

16. Print Formats & Reports

16.1 Print Formats Required

Print Format	DocType	Key Content
Vehicle Sale Invoice	Vehicle Sale	VIN, specs, price breakdown, GST, terms
Service Job Card	Service Job Card	Job details, parts, labour, technician sign-off
Insurance Certificate	Insurance Policy	Policy number, vehicle, coverage, premium
Loan Sanction Letter	Loan Application	Loan amount, EMI, tenure, bank details
Delivery Checklist	Vehicle Delivery Checklist	Accessories, documents, key handover
OEM Monthly Report	Report	Model-wise sales, finance %, insurance %

16.2 Custom Reports List

Report Name	Type	Used By
Slow Moving Inventory	Script Report	DMS Manager, Dealer Admin
OEM Monthly Sales Report	Script Report	Dealer Admin
Sales Consultant Performance	Script Report	Dealer Admin, DMS Manager
Service Revenue Analysis	Script Report	Dealer Admin
Insurance Renewal Due	Query Report	Finance Executive
AMC Expiry Report	Query Report	Service Advisor
Lead Conversion Funnel	Script Report	DMS Manager
Monthly Incentive Summary	Script Report	HR Manager

17. Testing Strategy

17.1 Test Coverage Requirements

Module	Test Cases	Priority
Vehicle DocType	VIN validation, days_in_stock calc, status transitions	High
Vehicle Sale	Total calculation, availability check, invoice creation	High
EMI Calculator	Standard EMI formula accuracy ($\pm$ ₹50 tolerance)	High
Service Job Card	Parts request auto-creation, technician validation	Medium
WhatsApp Integration	Message formatting, error handling, retry	Medium
Incentive Calculation	All components, edge cases (zero sales)	Medium
Workflow Transitions	All state transitions, condition checks	High

17.2 Running Tests

```
# Run all tests for the custom app
bench --site dealership.local run-tests --app auto_dealer

# Run specific test module
bench --site dealership.local run-tests \
  --module auto_dealer.tests.test_vehicle

# Run with coverage report
bench --site dealership.local run-tests \
  --app auto_dealer --coverage
```

18. Deployment Guide

18.1 Production Setup

```
# Enable production mode (Supervisor + Nginx)
sudo bench setup production frappe

# Configure Nginx
bench setup nginx
sudo service nginx reload

# Install SSL certificate
sudo certbot --nginx -d dealership.yourdomain.com

# Configure daily backups
bench --site dealership.local set-config backup_limit 7
```

18.2 Supervisor Workers

Process	Purpose	Instances
frappe-web (gunicorn)	Serve HTTP requests	4 workers
frappe-worker-default	Short background jobs	2 workers
frappe-worker-long	Long-running jobs (reports, bulk)	1 worker
frappe-schedule	Scheduler — triggers cron tasks	1

18.3 Environment Variables & Security

- Store all API keys in Auto Dealer Settings with Password fieldtype (encrypted at rest)
- Restrict database access to localhost only (bind-address = 127.0.0.1)
- Enable UFW firewall — allow only ports 22 (SSH), 80, 443
- Set up fail2ban for brute-force protection on SSH and web login
- Configure automated nightly backups to an off-server location (S3/Google Cloud Storage)
- Enable 2FA for all Dealer Admin accounts

19. Go-Live Checklist

Phase 1 — Infrastructure (Week 1)

- Server provisioned, hardened, and tested
- ERPNext v15 installed and accessible
- Custom app auto_dealer installed and smoke-tested
- SSL certificate configured and auto-renewal enabled
- Daily automated backups configured and tested
- MariaDB performance tuned (innodb_buffer_pool_size = 4G)

Phase 2 — Master Data (Week 2)

- Company, GSTIN, and address configured
- Chart of accounts set up for auto dealership
- Vehicle Makes, Models, Colors master data imported
- Showroom and service warehouse locations created
- Labour service items and common parts item masters imported
- GST tax templates configured (CGST + SGST)
- Empanelled banks and insurance companies configured

Phase 3 — Users, Roles & Workflows (Week 2)

- All 6 roles created and permissions verified
- User accounts created for all staff
- Vehicle Sale workflow activated and tested end-to-end
- Service Job Card workflow activated and tested
- Email and notification configuration done

Phase 4 — Integrations (Week 3)

- WhatsApp API connected, templates approved, test messages sent
- CarDekho / marketplace sync tested with a sample vehicle
- Loan DSA API connected and application submission tested
- Insurance portal API connected and quote generation tested

Phase 5 — Data Migration (Week 3–4)

- Existing vehicle stock imported via CSV upload
- Active customers imported and verified
- Open service job cards migrated
- Active AMC contracts and insurance policies entered

Phase 6 — Training (Week 4)

- Dealer Admin and DMS Manager trained (2 days)
- Sales Consultants trained on CRM and Vehicle Sale (1 day)
- Service Advisors and Technicians trained on Job Card flow (1 day)
- Finance team trained on Loan and Insurance modules (1 day)
- User Acceptance Testing completed and signed off by each department

Phase 7 — Go-Live

- All UAT issues resolved and re-tested
- Final production backup taken
- Go-live date communicated to all staff
- Support contact and escalation matrix shared
- Hypercare period defined (2 weeks of daily check-ins post go-live)

20. Maintenance & Upgrades

20.1 Routine Maintenance Commands

```
# Daily health check
bench --site dealership.local doctor

# Clear cache (after config changes)
bench --site dealership.local clear-cache

# Take manual backup
bench --site dealership.local backup --with-files

# Update ERPNext + custom app
bench update --pull
bench migrate
sudo supervisorctl restart all
```

20.2 Monitoring Alerts

Alert	Threshold	Action
Site downtime	> 1 minute	Page on-call developer immediately
Disk usage	> 80%	Clean old backups, expand disk
Worker queue backlog	> 500 jobs	Scale worker count
Slow SQL queries	> 5 sec average	Review and add indexes
Background job failures	> 5/hour	Check frappe error log
Backup failure	Any failure	Immediate attention

20.3 Appendix — DocType Quick Reference

DocType	Purpose	Key Fields
Vehicle	Master vehicle record	VIN, status, make, model, price, days_in_stock
Vehicle Sale	Sales transaction	Vehicle, customer, grand_total, delivery_date
Test Drive	Test drive booking	Vehicle, customer, date/time, license_no
Service Job Card	Workshop job	Vehicle, technician, parts, labour, status
Loan Application	Finance application	Amount, rate, tenure, bank, EMI
Insurance Policy	Insurance record	Policy_no, insurer, expiry, premium
AMC Contract	Maintenance contract	Vehicle, duration, next_service_due
OEM Target	Monthly OEM targets	Month, volume_target, revenue_target
Sales Incentive Rule	Commission slabs	Vehicle_type, incentive_amount

Loyalty Account	Customer points	Customer, total_points, transactions
-----------------	-----------------	--------------------------------------

Document Version 1.0 | April 2026 | Framework: ERPNext v15+ / Frappe | Custom App: auto_dealer
